

Updating the Digital Contacts Lists (document for Alinco DJ-MD5)

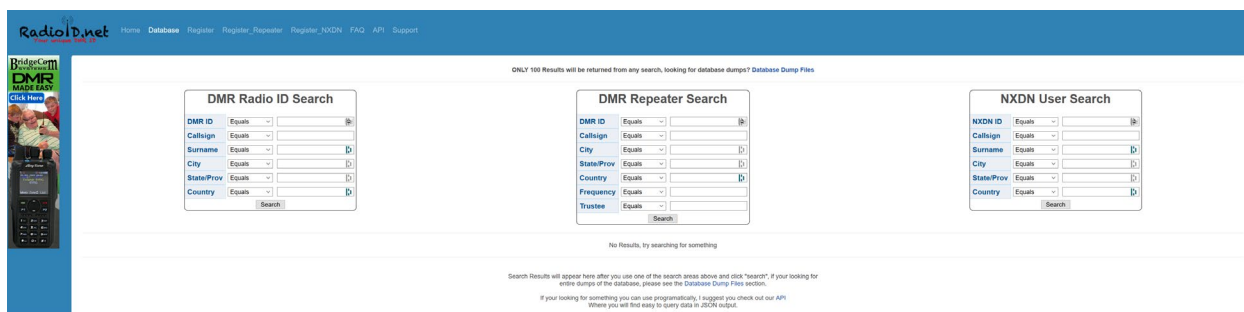

Revised: 11 April 2020

Navigate to www.radioid.net

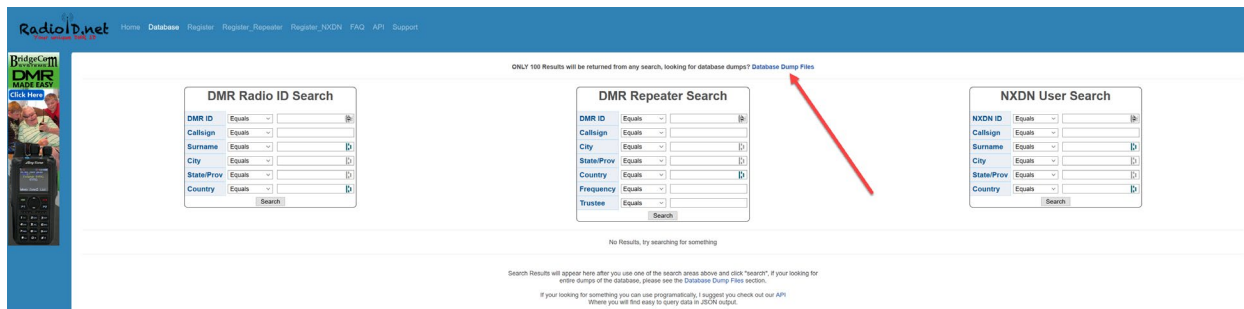

Click on Database

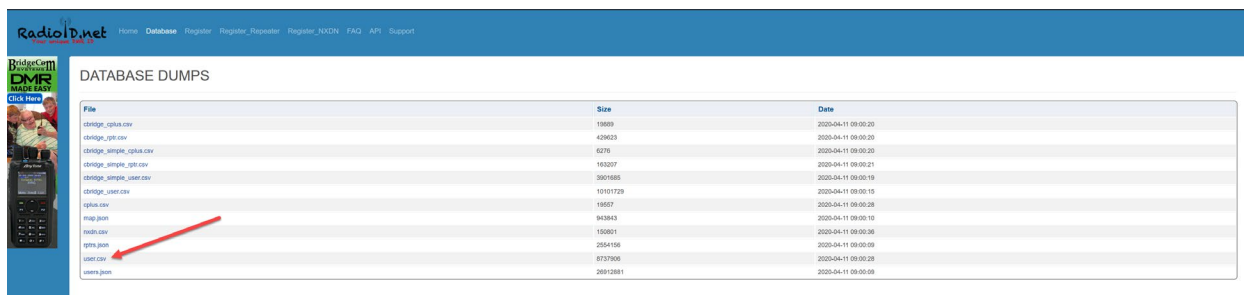

And you will get a screen that looks like

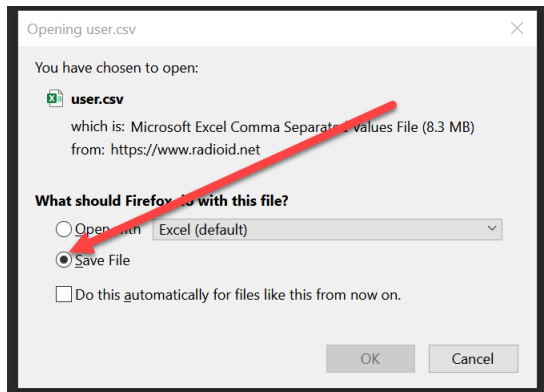

Click on Database Dump files

The file you want to download is user.csv

Click on user.csv to begin the download. Click on the Save file button.

Click Ok button. Pay attention to where it is downloaded

Now launch the Alinco programming software.

Click on Tool and then import.

Click on the Digital Contact List.

Navigate to where the user.csv file was downloaded and select the file and then click Open.

You should see the location of the user.csv file in the display.

Click on the import button at the bottom

This part doesn't take too long. You should see a progress indicator.

Once the import is complete. You should see a message "Import Complete".

Make any other changes you might want to make to the programming of the DJ-MD5.

When you get ready to write your changes to the radio be sure to click on the Digital Contact item. This is the step that tells the software to upload the new Digital Contact information that you just imported.

With the Digital Contacts List check box selected the writing to the radio takes a bit longer. Remember to uncheck it in future writes to the radio if you've not updated the Digital Contacts list or you will be spending a lot of time waiting on a write to complete that you really didn't need to.
